Re.: **UCLA Kinsey Hall (Renamed Kaplan Hall)**
Completion of Construction/Seismic Rating

Dear Mr. LaVanne:

To the best of our knowledge, construction of the Kinsey Hall Seismic Correction project has been completed in accordance with the structural drawings dated December 8, 2003. The original construction of Kinsey Hall consisted of a non-ductile reinforced concrete frame with unreinforced masonry infill walls. The Seismic Correction project consisted of the addition of a complete reinforced concrete shear wall system.

The University of California Seismic Safety Policy was originally issued on January 20, 1975 with the latest revision dated April 20, 2000. The seismic policy provides four seismic performance ratings: Good, Fair, Poor and Very Poor. A "Good" seismic performance rating applies to buildings for which the performance during a major seismic disturbance "is anticipated to result in some structural and/or nonstructural damage and/or falling hazards" that would not significantly jeopardize life.

With the completion of construction of the Seismic Correction project in accordance with the structural drawings dated December 8, 2003, Kinsey Hall now qualifies for a seismic rating of "Good" according to the U.C. Seismic Safety Policy.

Please do not hesitate to contact me if you have any questions.

Sincerely,

NABIH YOUSSEF & ASSOCIATES

Jim Zeiner, S.E.
Project Manager
